

Synthetic semantic completeness fixture

Left column line one introduces the experiment.

Left column line two preserves source order.

Left column line three points to Figure 1.

Left column line four has footnote reference 1.

Right column line one follows the left column.

Right column line two describes the visual result.

Right column line three introduces the fallback.

Right column line four closes the main reading flow.

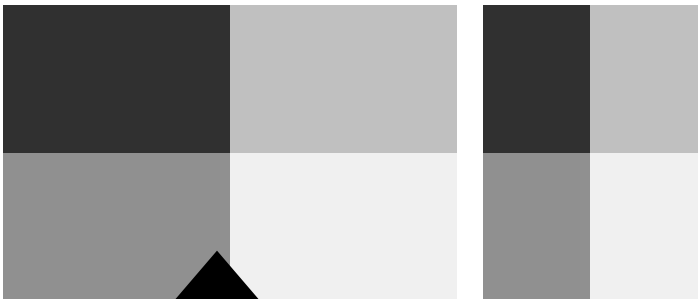

Figure 1. Two synthetic values share one source caption.

Table 1. Synthetic values have validated columns.

Group	Score
Control	10

Equation 1. A display equation uses a source fallback.

$$x + y = z$$

Footnote 1: This note must stay linked to its reference.
