

# Bounded visual adjudication study

Ada Fixture

## Abstract

This local fixture proves that bounded visual choices preserve complete source assets.  
The replayable decision record contains identifiers and choices without document payloads.

LOCAL FALLBACK  
COMPLETE AS

Figure 1. Two complete local candidates across the page require one bounded owner choice before publication.

## Discussion

The second visual remains below the deterministic confidence threshold.

Its complete source-backed asset is still available for a bounded local fallback.

No global matcher threshold or diagnostic category changes during adjudication.
